

Welcome to Aether Editor!

This document is a quick guide to help you learn basic Markdown formatting. Edit this text on the left panel and watch the **PDF preview** update automatically on the right!

Basic Text Formatting

You can easily emphasize your words:

- Use double asterisks for **bold text**.
- Use a single asterisk for *italic text*.
- Or combine both for ***bold and italic***.

To highlight something as inline code within a sentence, use backticks: `var x = 10`.

Organized Lists

Task List:

- Type your text in Markdown.
- Wait half a second (debounce) for the preview to update.
- Click "Export to PDF" on the top bar.

Numbered List (Step-by-Step):

1. Install dependencies.
2. Run the script.
3. Start typing!

Quotes and Links

Blockquotes are great for highlighting ideas or important notes:

"Simplicity is the ultimate sophistication." - Leonardo da Vinci

You can also easily insert [links to web pages](#).

Syntax Highlighted Code Blocks

You can create code blocks by wrapping text with triple backticks and the language name. See how Python gets highlighted:

```
def greet(name):  
    """A simple welcome function."""  
    message = f"Hello, {name}! Enjoy using the editor."  
    return message  
  
print(greet("Your Name"))
```
